

# Have you heard about Edstrom herd cooling?

We offer unique, economical solutions, delivering an ROI for nearly any environmental condition in:

- **Feed Line Cooling**
- **Holding Pen Cooling**
- **Cool Sense™ Motion Cooling**

**Edstrom**

Add Edstrom cooling to your arsenal for protecting your animals from the dangers of heat stress.

**Coarse Droplet Soaker Nozzles** High-capacity Edstrom soaker nozzles produce a coarse droplet spray which penetrates the hair and wets the cow to the hide.

**Intermittent Shower Cooling Systems** The Edstrom controller helps reduce the amount of water required at one time by splitting a barn into multiple zones. The Smart Mode™ setting automatically adjusts the length of time between shower cycles as the temperature changes.

**Cool Sense™ Motion Cooling System** The Cool Sense™ motion cooling system is an effective and efficient way of cooling dairy cows as they pass beneath it in an exit lane or other walkway. Cooling is achieved by automatically showering dairy cows with a coarse droplet shower.
